

CUSTOMER PORTAL LOCATION REFERENCE POINTS

SLIDE 1

How to complete the location reference information within a customer portal application.

SLIDE 2

The location reference information is only required for a public utility permit application. It is a mandatory field so must be completed for successful application submission.

Public utility applications require accurate information to locate the works.

Such as reference type, lot plan number, if available, or the street address.

Then details such as, the nearest cross street, or latitude and longitude information if available.

Where the TMR road number and chainage are available, they should also be recorded to allow future migration with other TMR datasets.

Ultimately, if a utility is installing an asset that will be in the road land for decades, TMR require the absolute, rather than relative location of that proposed asset to understand its impact relative to TMR's current and future use of the corridor.

Note. You are able to enter multiple location reference points within your application to assist with works location details.

SLIDE 3

The upcoming demonstration, will show you an example of how to complete the location reference point.

SLIDE 4

To add location reference points click create.

Drop down the reference type field and choose lot plan number or street address option.

For this application we will be using a, street address.

In the details field enter the address.

Once details have been entered click save.

The location reference points will be displayed in the panel.
